Executive Summary

On March 22-26, 2010 and April 19-23, 2010 a team of four BAASS personnel traveled to Fort Duchesne, UT to continue an ongoing investigation surrounding [AAP Person 4] Ranch property. This team consisted of two investigators, [AAP Person 41] and [AAP Person 14] and two scientists, [AAP Person 29] and [AAP Person 28] The primary focus of the trip was to locate evidence of the reported unidentified creatures and lights, gather additional detailed descriptions, locate and interview new witnesses, along with the establishment of a series of digital game cameras both on the [AAP Person 4] Ranch property and surrounding area.

While conducting a re-interview with [1843(a)(2)] he advised just a couple of days prior to our arrival in the area, he had been witness to what he believed was a "*Skinwalker*". [1843(a)(2)] stated the Skinwalker was chased by his dogs and ran through a barb-wire fence, from which a hair sample was collected and submitted for analysis.

[1843(a)(2)] This sighting by [1843(a)(2)] was corroborated by the [1843(a)(2)] family. Several members of the [1843(a)(2)] family experienced a similar encounter with a "*black shadowy figure*" just outside their residence within two hours of the [1843(a)(2)] encounter.

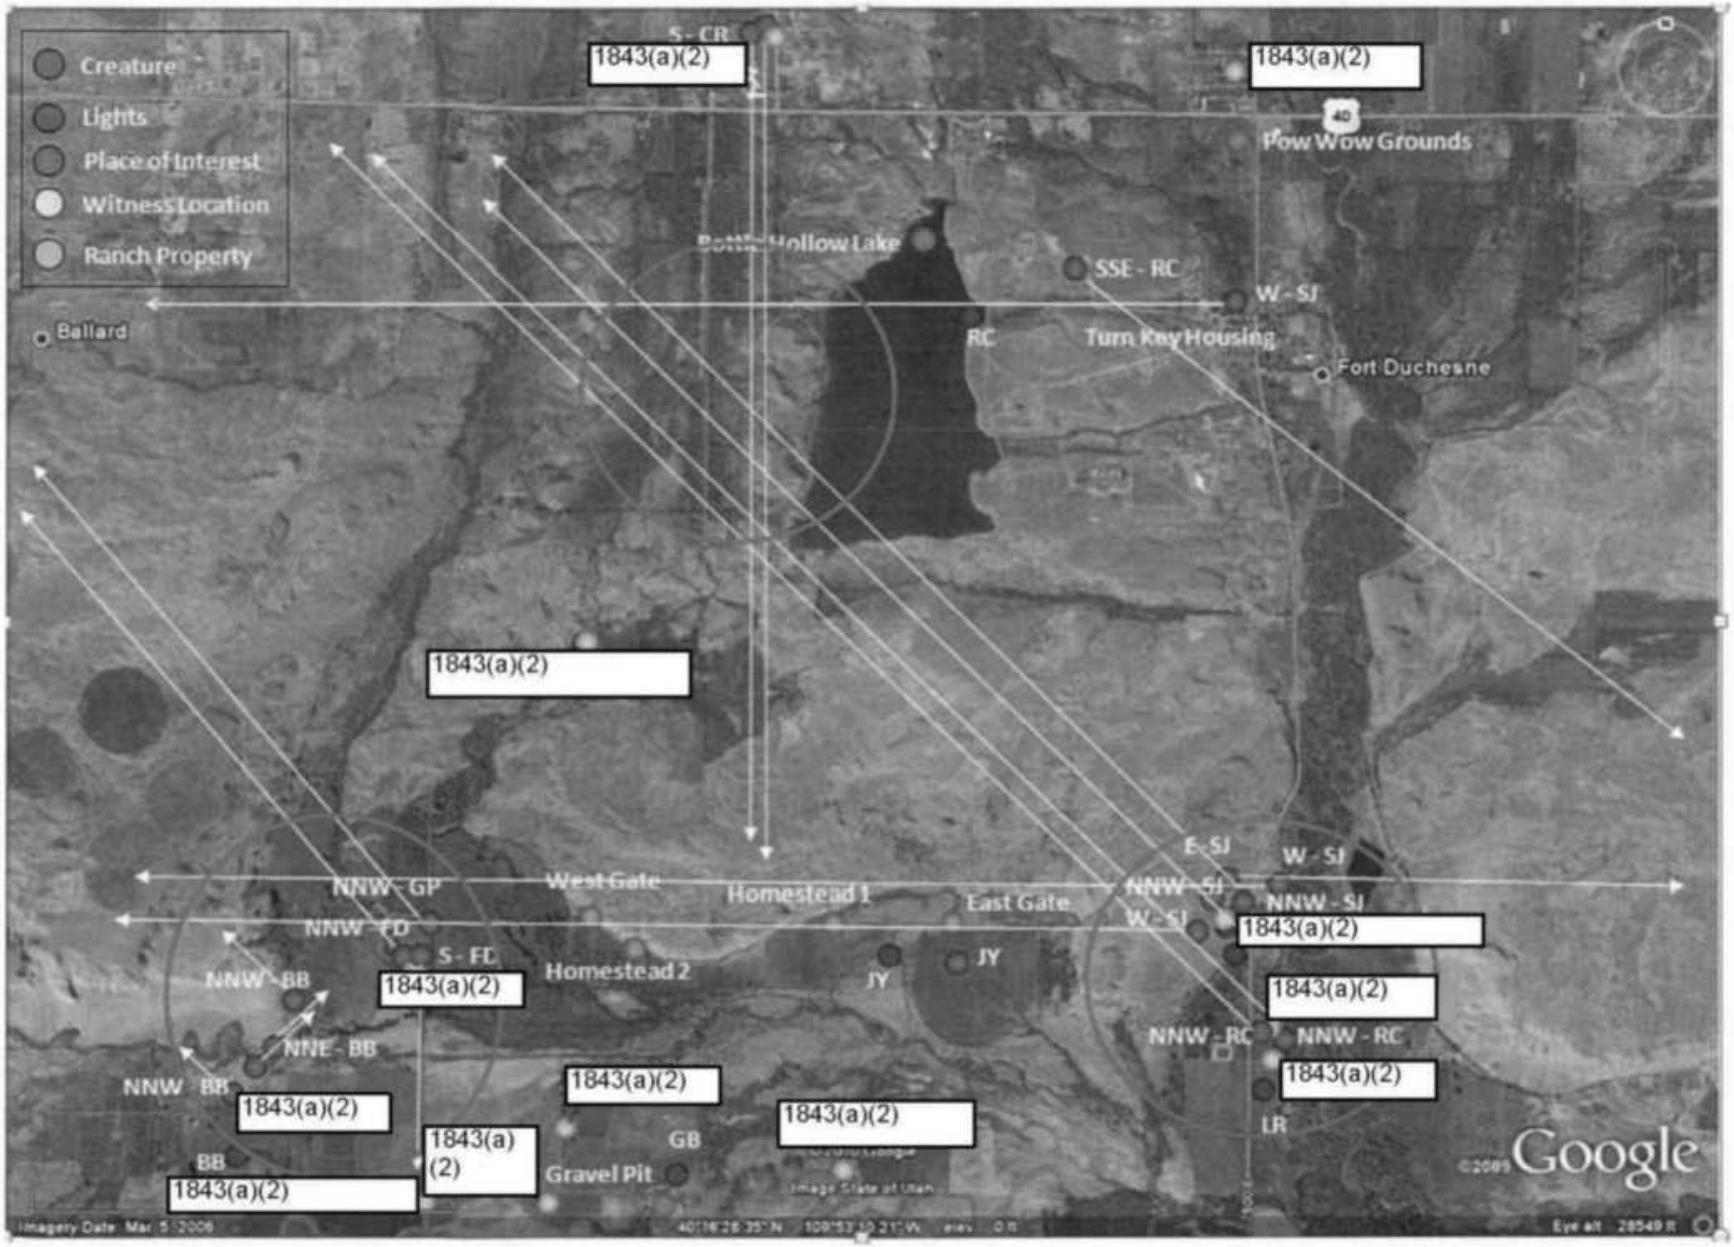

A series of seven (7) Moultrie digital game cameras were installed on both the [AAP Person 4] Ranch property and the property of [1843(a)(2)] in an attempt to capture either a digital photograph or digital video of either anomalous creatures or lights which were reported to be frequently seen in the area. A protocol was also established to have the memory cards of the cameras secured on a weekly basis by BAASS security personnel stationed on the [AAP Person 4] Ranch property.

The following is a summary of the ongoing investigation and witness interviews.

Map of Creature Sightings from Approximately Three-Mile Radius around the Ranch

A Google Earth map of the ranch and surrounding areas was created (approx altitude of map was from 30,000 feet). The locations of each creature sighting together with last known direction of travel were obtained from each eyewitness and then plotted on the map. Then, using an assumption of straight line travel (extrapolation of known direction of movement of creatures), a series of straight lines were drawn on the map. The red circles represent intersection points of these lines. In a sense, these intersection points could be construed as arbitrary, particularly since it is recognized that the creatures may have changed their direction of travel once out of sight of the eyewitnesses.

Nevertheless, with the above caveats in mind, it is noteworthy that there are three intersection points of the creatures' putative lines of travel. It can be seen from the figure that all three convergence points are very close to the ranch. One intersection point lies just west of the ranch and the other two lie in the vicinity of Bottle Hollow reservoir. If locations for sustained and continuous night watching to capture sightings/photographs of these creatures were to be nominated, the three locations delineated by the red circles could be top of the list.

Utah Ranch Report Abstract

The "*Utah Ranch*" investigation is an ongoing project which to date has incorporated several deployments of investigators, scientists and engineers. The primary focus of the Utah ranch investigations are:

- To comprehensively interview a large number of people who have lived in the area surrounding the Utah Ranch in order to delineate the scope and variety of eyewitness reports in the area. The purpose is to establish commonalities and differences with the ongoing reports of unusual activity on the ranch property itself.

- To use portable sensor equipment to measure baseline magnetic field parameters, EM spectrum data, ionizing radiation and chemical elemental analysis of soil on the Utah Ranch property and surrounding areas. It goes without saying a primary purpose is to obtain definitive photographic, digital, sound and chemical evidence of purported anomalies.

- To use plants, including transgenic plants, as biosensors of multiple radiation and magnetic field deviations from the norm on the ranch property. These plant experiments have been tailored as user friendly reporting systems for electromagnetic energy detection based on extensive research of the peer reviewed literature.

- To initiate a variety of games, puzzles, and other strategies in order to establish communication with the source/origin of reported anomalies on the ranch property.

Witnesses have reported unidentified balls of light at close range, daytime sightings of "*dog-like*" creatures running on two legs, unnatural animalistic howling/screaming, "*little people*", prehistoric-like birds and a maggot which measured about 8-feet long and 2 to 3-feet in diameter.

To date, May 7, 2010, over twenty-five (25) people have been contacted and interviewed in person, predominantly at their homes. This group consists of all life-long residents of the area within a mile or two of the ranch property, four (4) local police officers, eleven (11) Native Americas, including a Shaman, the director of the local Fish and Wildlife office, twelve (12) ranchers, six (6) business owners and approximately fifteen (15) members of the Mormon Church. All of the people interviewed have had

first hand encounters. Eleven (11) separate individuals witnessed a bipedal "*dog-like*" creature and/or orbs of light at different times in different locations near the Utah Ranch property. Many of the reported observations took place during daytime and nighttime and occurred from twenty years ago to as recent as April 2010. The eyewitness ages ranged from fifteen to seventy-seven years old.

The following is a summary of the Utah ranch investigation findings to date

1. Comprehensive multiple witness descriptions of a large "*dog*" or "*wolf*" like creature or creatures which have the ability to walk and run at speed on two legs. Multiple witnesses have described in their interviews, when the creature is standing on two legs, the estimated height is six to seven feet. From these interviews, there may be at least three separate types of creatures. Total number of independent witnesses (separately interviewed) eleven.

2. Multiple witness descriptions of small, hairy, three-foot tall "*troll*" like creatures with long arms which appear to run in a similar way to chimpanzees or orangutan. (Four independent eyewitnesses)

3. Multiple witnesses (>2) reports of large "*worm*" like creatures, a prehistoric "*pterodactyl*" like creature, "*little people*" and other anomalies. It should be noted the vast majority of reports detailed in points 1-3 have allegedly occurred within the last five to seven years.

4. Interspersed with the allegations of multiple creature sightings are multiple reports of unidentified flying objects, to include unidentified aircraft and "*balls of light*". Some of these allegations are recent and some historic recollection.

5. BAASS has obtained photographs of tracks in the snow which remain unidentified. These photographs identify (a) two sets of tracks merge into one, and (b) where tracks in the snow on the [redacted] Ranch property appear to walk "*through*" a barbed wire fence. BAASS has also obtained a variety of hair samples from the vicinity of these tracks. These hair samples are currently undergoing scientific DNA analysis.

AAP Person 4

6. BAASS has conducted comprehensive electromagnetic signature sweeps of the [redacted] Ranch property. One set of measurements taken at a point on the mesa at the ranch indicated a strong, yet to be explained, signal which was not detected on previous readings. The report described: "*Location D2 recorded two large signals in both the horizontal and vertical positions. These signals were not present the day before when measurements were taken at D0. The first signal was 1210, 1213 and 1216 MHz and*

AAP Person 4

the second large spike was 1232.5, 1235.5 and 1238.5 MHz. The signals fell in the frequency bands of 1164-1215 and 1215-1240 MHz. This space is allocated for Earth exploration-satellite (active), radio location G56, radio navigation-satellite (space-to-Earth) (space to space) G132, and space research (active). Provisions G56 and G132 state these frequency spans are primarily for military purposes, but they can be used by other federal agencies in support of science and research" The signals were detectable between 1-2 GHz with both horizontal and vertically polarized antennae. Further measurements and research, particularly into satellite transmitting frequencies and times will be required to identify the origin of these signals.

1843(a)(2) Family

The 1843(a)(2) were re-interviewed for the purpose of collecting a more complete set of data on their encounters with both the red ball of light and the creatures. 1843(a)(2) son, 1843(a)(2) and his 18-year-old girlfriend 1843(a)(2) were previously identified as witnesses to the anomalous activity and were also present and able to be interviewed. 1843(a)(2) is a 23-year-old half Native American, half Hispanic man who currently resides in Phoenix, AZ. 1843(a)(2) is an 18-year-old black female who resides with her mother in the 1843(a)(2) housing development in Fort Duchesne, UT.

1843(a)(2) and 1843(a)(2)

1843(a)(2) said he frequently stays with his mother 1843(a)(2) and stepfather, 1843(a)(2) The family said the night before (03/22/2010) they were lying in their beds about 2300 hours when they heard a very loud howling noise coming from directly outside the south side of the house which they stated was the same sound they heard when they have seen the dog-like creature in the past. 1843(a)(2) described it as a "*growling roar*". This sound occurred two times and lasted about five to ten seconds each time. The growl/roar sounded as if it was being made by a creature which was stationary. They said it was definitely not a coyote or a human. The growl/roar sounded as if it originated from a large animal. 1843(a)(2) and 1843(a)(2) felt uneasy and tense. 1843(a)(2) and 1843(a)(2) stated they saw a shadow outside their bedroom window and soon noticed there were actually two shadows. The shadows were in the general shape of a human, but the tallest was approximately nine (9) feet and the smaller was approximately eight (8) feet tall. Both 1843(a)(2) and 1843(a)(2) believe the shadows belonged to the dog-like creature.

1843(a)(2) was also a witness to an old-lady-like creature jumping from rooftop to rooftop in her neighborhood known as 1843(a)(2) approximately one year ago. It had black shoulder-length hair and was definitely a female. The creature was wearing old "*rags*" clothing. 1843(a)(2) said it was hunched over and she could not get a good look at its face. She lost sight of the creature after about one minute, and went into her house to tell her mother. 1843(a)(2) stated her mother also witnessed the "*old lady*" and called 911, to which law enforcement responded. 1843(a)(2) said the creature is also known in Ute culture as the "*Basket Lady*". Investigators are currently attempting to establish contact and a relationship with 1843(a)(2) mother in an effort to obtain additional information regarding this encounter.

1843(a)(2) described an encounter in which a creature reached into his bedroom window while he was lying on his bed. This event occurred around 0300-0400

approximately seven (7) years ago (winter of 2003). The arm was covered in human-like thick, black hair/fur (three inches long). The arm was about three (3) feet long. 1843(a)(2) said the arm was most definitely not human. The nails on the hand were dirt color (as a dog's nails) and the fingers were monkey-like. saw four (4) fingers and no thumb. Each finger was about ten (10) inches long. yelled and the creature retracted its arm. The arm reached in the window far enough to be two (2) feet away from . said he did not see any other parts of this creature nor did he hear or smell anything associated with it.

also described the encounter with the creature with large yellow eyes witnessed behind their residence. This creature was witnessed with and . described this creature to be taller than six (6) feet. It was walking on two (2) legs at a distance. The softball sized eyes would change from green to light brown in the spotlight. The eyes were reflective in the spotlight, similar to the eyes of a cat. and previously provided additional details regarding this sighting.

then described the bird-like creature which was also witnessed by and can be found in the "*bird-like creature*" spreadsheet. said he and were returning from playing basketball when they saw a large bird flying overhead. They were next to house and described the bird as similar to a prehistoric pterodactyl. The head/beak was about two to three (2-3) feet long and had a wingspan of approximately twelve (12) feet wide. They could hear the wings flap in the wind and saw it land directly across the street in some trees. As the bird was landing and its wings flapping they could see and hear the tree branches moving. They were both frightened and ran to house. said they ran because the bird was big enough to pick them up and carry them away. They did not see the bird again, nor do they know where it went afterwards.

1843(a)(2) made a point to mention the humming noise they hear from time to time. She describes it as hovering around the house and it began a couple of weeks prior to this interview. says it sometimes shakes the windows of the house.

also recalls seeing what she described as "*a portal*" when she was younger after she had just finished going swimming with friends. believes the portal is a doorway to another world. She said she was not sure what a portal was until she read the "*Skinwalker*" book. believes there is a lot of energy in the area and the portal is used as a doorway for strange things to go in and out.

In a meeting which took place on April 21, 2010, provided additional details on this "*portal*" she saw twenty years ago. She described is as a stationary, colorless, transparent sort of wall which was rippling like water. She remarked how it was similar to the appearance of a heat wave. She saw the "*portal*" in the mid-afternoon and said it was approximately thirty to forty (30-40) feet high. said she was approximately one hundred (100) feet away from the "*portal*" when she saw it and it only caused feelings of peacefulness. said her friends also saw the "*portal*" have all passed away.

responses are recorded in the table below and have also been included in the Lighting Anomaly spreadsheet.

Question	Response
Was it a single portal or were there more than one?	There was one
What was the approximate size of the portal?	Not sure
Was there a noticeable shape to the portal?	Not sure
Was it transparent, translucent or opaque?	Transparent
Was it self-illuminating at all?	No
Was it of any particular color?	No, it was clear.
Were there any changing colors?	No, it just stayed clear.
Was there a pulsing or was it constant?	It was rippling like water does.
Would you describe it as a gas or solid object?	It was not a solid object.
Do you have any ideas as to what material it may have been made of?	Not sure
Was there a smell or sound associated with this portal?	No

Was there any kind of smoke or heat related to this portal?	No
Did the portal exhibit any kind of travel behavior?	No, it was just stationary.
Did it seem to react to any kind of stimuli?	No
How far up in altitude did it go?	Maybe about thirty to forty feet high.
Did it seem to exhibit any magnetic properties?	No
Did it seem to cause any noticeable atmospheric effects?	No
Did it ever disappear while you were looking at it?	No
How far were you from the portal when you saw it?	One hundred feet
Did seeing it cause fear or any other emotion?	Just a peaceful feeling.
What time of the day did you see the portal?	Daytime/ mid-afternoon
How long did you see the portal?	Unsure, it was still there when we left.
How long ago did you see the portal?	About twenty years ago.
How many times have you seen the portal?	Once

1843(a)(2) [redacted] made mention of a gentleman named 1843(a)(2) [redacted] who lives on 1843(a)(2) [redacted] and his many sightings of "*a lot of spaceships and UFOs.*" Investigators are currently attempting to locate this individual for an interview.

She also mentioned her sister had what was described as a "*flaming ball*" chasing her car from one town to another. It is unclear as to whether this particular sister is still 1843(a)(2) living. [redacted] appeared distraught over recently losing a close friend and did not wish to speak of such things.

1843(a)(2) In the summer time, [redacted] says a "*ghost car*" can be seen in the evening. In the rear view mirror, one can see what appear to be headlights, but there is no car physically there.

There were additional details given on the little people and the dog-like creature 1843(a)(2) mentioned in the previous visit as well as on the red ball of light witnessed by both 1843(a)(2) [redacted] and [redacted] which can be viewed on the attached respective spreadsheets.

1843(a)(2)

In the meeting with 1843(a)(2) the biological objective of the interview was to obtain detailed physiological effects of the red ball of light based on the fact in a previous interview 1843(a)(2) indicated he experienced numbness and warmth when the red ball of light came within a few inches of his face. Biologist AAP Person 29 designed questions to aid in the identification of the type of energy emanating from the red ball of light by focusing on physical effects. For the duration of the interview, [redacted] was fixing his car radio and was unable to give his full attention. 1843(a)(2)

See below for the list of questions and answers.

Question	Response
How far did the red ball of light come from your face?	About 4 inches.
Was there a smell associated with the red ball of light?	A rotten smell of dirt and mud.
Did you experience a ringing in your ears?	Yes
How long did the ringing last?	For the entire time that the red ball of light was by his face and then a few seconds following.
Can you describe the ringing?	High pitched. A constant whistle.
Did you hear anything besides the ringing?	No
Did you feel any heat?	Yes
Was it a burning heat?	No, just warm.
Did you experience any numbness?	Yes
When did the numbness begin?	As soon as the red ball of light had past his face.
How long did the numbness last?	For a few minutes.
Can you describe the numbness?	He couldn't feel sensation on his skin.
Where on your face were you numb?	From the tip of his nose over to the left side of his face and a little area on his chin.
Did you experience any pins and needles?	No
Did you have any type of inflammation or redness on your face?	No
Did you experience any dizziness?	No

Did the red ball of light affect or burn your eyes?	No
Was your vision clear afterwards?	Yes
Any long term effects on your eyes?	No
Did you experience a headache after the experience?	No
Were you able to sleep okay that night?	Yes

1843(a)(2)

The team also visited with 1843(a)(2) at his home on 03/24/2010 at approximately 1030 hours. The interview was beneficial as the team was able to gather additional details on 1843(a)(2) the anomalous lights and creatures witnessed by [redacted] Additionally, [redacted] reported an 1843(a)(2) incident which had happened two nights prior involving a "*Skinwalker*". He claimed he was sitting inside his house at about 2000 hours when he saw a large shadow which he believed was a "*Skinwalker*" run very quickly in front of his house.

As this creature ran towards the road he got up and looked out his front door, but did not go outside. He heard the creature repeatedly run into his barb wire as it was being chased by his barking dogs. It was running so fast it looked like a black shadow. Investigator [redacted] searched the fence line and found a patch of fur which was caught in one of the barbs where [redacted] had indicated the "*Skinwalker*" had run into it. The fur matched the color description given by 1843 (a)(2) of the "*Skinwalker*". This sample was collected and submitted for scientific analysis. Please refer to Scientific Analysis for complete details of sample and results.

AAP Person 41

1843(a)(2)

1843(a)(2) [redacted] said his sister, 1843(a)(2) witnessed a UFO landing or hovering in a field by her house a year ago in March 2009. [redacted] lives approximately 200 yards south of her 1843(a)(2) brother [redacted] 1843(a)(2) was able to speak briefly with [redacted] who confirmed her sighing; however she was unable to meet with us for a formal interview. [redacted] seemed very 1843(a)(2) willing to cooperate with our investigation and efforts will continue to arrange a formal interview of [redacted] regarding this incident. The blue ball of light witnessed by [redacted] was 1843(a)(2) similar to a blue ball of light witnessed by a man named 1843(a)(2) . [redacted] identified 1843(a)(2) [redacted] as a potential cooperative witness.

1843(a)(2)

1843(a)(2)

In the meeting with 1843(a)(2) on March 24, 2010, he began by describing an event which had just taken place the Monday prior to the visit. He explained a Skinwalker had been on his property causing his dogs to "*go wild.*" [redacted] claims the dogs cornered the 1843(a)(2) Skinwalker and after repeatedly running into the fence, it (Skinwalker) took off toward the old abandoned farm house across the road from his property. He said it was definitely not a person and it appeared as a darkness moving very fast. He explained the Skinwalker was moving at a high rate of speed "*like a track star*" and was faster than the Skinwalker he saw at 1843(a)(2)

1843(a)(2) More intricate details were not noticed by [redacted] as he said it was moving so quickly, he could not see more than a black shadow. It was six feet tall and made a howling noise which he said caused the surrounding coyotes to howl as well. He recalls the sound to be the same howling sound he has heard in the past in conjunction with this creature and says it was very loud. [redacted] stated it lasted about thirty minutes and he never left his

1843(a)(2)

house, but stood by his front door looking out. He said it typically leaves an odor behind, but since he did not leave his home he was unable to comment on an odor.

Recalling his encounter with the Skinwalker at 1843(a)(2) in January of 2010, he described the creature to be six feet tall and hunched over and weighing approximately 250 lbs. He could see the fur where the light was shining on it and described it as black fur and short like Investigator AAP Person 14 hair with the gray coloring mixed in. The ears were pointed on the side of its head and it had a shorter looking tail. It ran like it was leaping. The head was described as looking like a German shepherd dog without the pointed nose. The nose was described to be more similar to a human nose. He said the Skinwalker should not be looked at directly and said the howl of the Skinwalker is a warning to let everyone know it is passing through.

1843(a)(2) discussed further the blue ball of light witnessed last year in relation to Bottle Hollow Lake. He explained at first he thought the light to be a blue colored street light. He also described its rate of speed to be like flare. It also crossed his mind it might be a meteor. Once the light disappeared near Bottle Hollow Lake, he said he went back inside the building. He came back out about thirty minutes later to see if the light was around and said he then saw the three helicopters. He believed they were chasing the light and when they had lost track of it, they (helicopters) simply flew away. The light ascended from the lake area and took off toward "*Skinwalker Ridge*" in an arc-like path after hovering in place for about ten seconds. The details he gave were necessary to complete the necessary data for any lighting anomalies.

1843(a)(2) also gave more information on the floating balls of light he mentioned as being so commonly seen among the community. The distance of these floating balls of light was approximately 125 yards away from him. He made the comparison of the behavior of these balls of light to be similar to "*Glenda the Good Witch*" on the *Wizard of Oz* movie when she was arriving or leaving as a ball of light. He said the lights would move behind something as if they were trying to hide when his presence was noted.

Further details of the creature and the lights are noted on the attached spreadsheets. The interview with 1843(a)(2) was recorded as well.

In March 2010, two (2) Moultrie game cameras were installed on the 1843(a)(2) property. During the April deployment, additional cameras were installed on the 1843(a)(2) property. Currently a total of four (4) Moultrie game cameras are in operation on the 1843(a)(2) property. These game cameras are identified as Moultrie I-60 game cameras, equipped with 4Gb memory cards. These cameras periodically checked by BAASS security personnel stationed on the AAP Person 4 Ranch property on a weekly basis and moved if and when necessary. A detailed map and GPS coordinates of these cameras can be referenced in the appendix of this report.

Below are photographs of the hair sample which was collected from the [redacted] property[1843(a)(2)] during the March deployment. Specific information regarding the scientific analysis of the sample can be located in the Scientific Analysis section of the report. Please see Figure 12 and Figure 13 for microscopic photographs of hair sample.

Figure 1 - Hair Sample from reported "Skinwalker" sighting on [1843(a)(2)] property

Figure 2 - Hair Sample from reported "Skinwalker" sighting on 1843(a)(2) property

Figure 3 - Hair Sample from reported "Skinwalker" sighting on 1843(a)(2) property

Figure 4 - Hair Sample from reported "Skinwalker" sighting on 1843(a)(2) property

Figure 5 - Hair Sample from reported "Skinwalker" sighting on 1843(a)(2) property

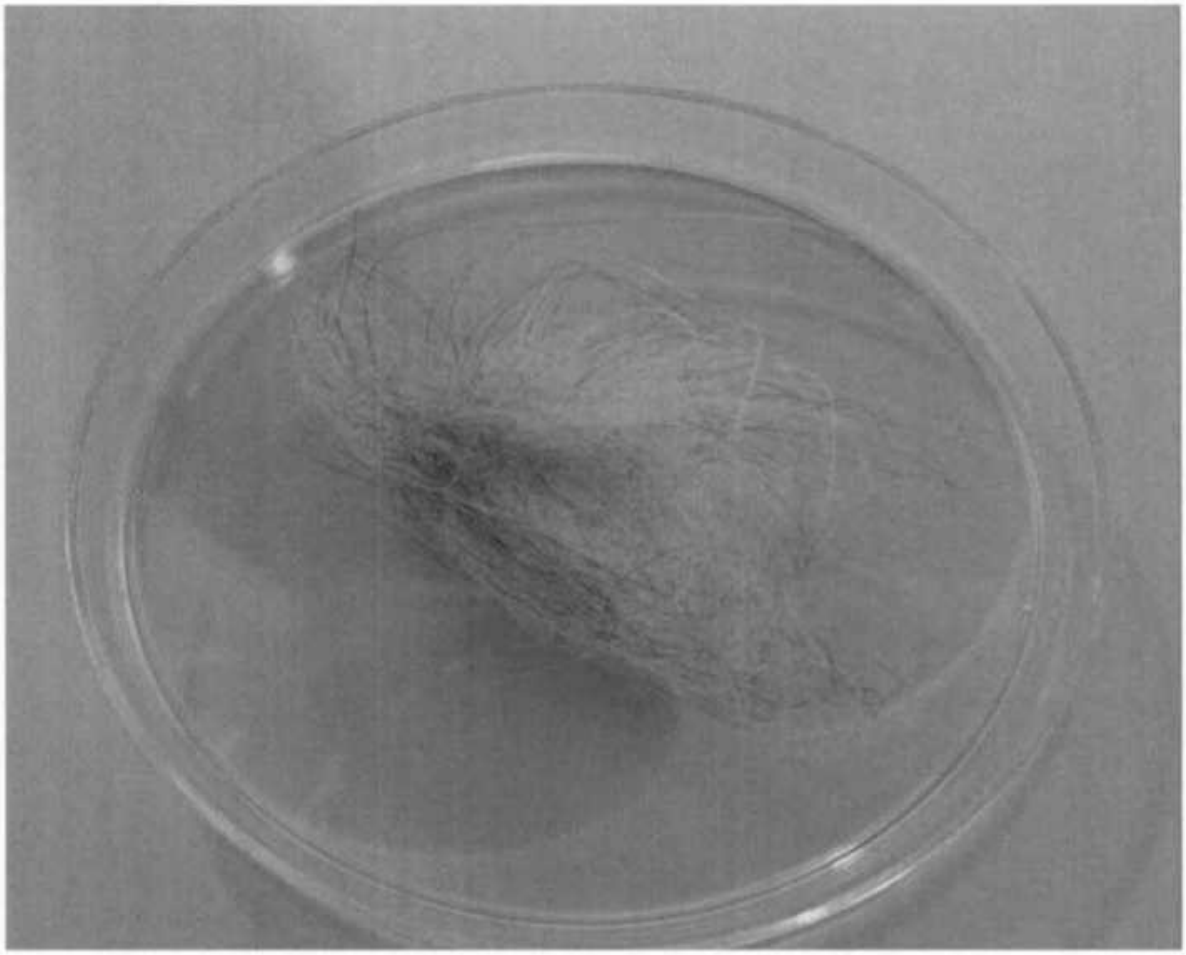

Figure 6 - Unknown hair sample - close up photo. Sample taken from 1843(a)(2) residence

1843(a)(2)

Contact was made with 1843(a)(2) however he refused to share details because he 1843(a)(2)
said he was "*sworn to secrecy*" by some people he refused to identify. refused
to tell investigators why or who swore him to secrecy. said if things "*calm down*" 1843(a)(2)
he would be willing to share his story. In another attempt to contact by phone, 1843(a)(2)
1843(a)(2) his wife, , shared her experience with the blue light, advising she and 1843(a)(2)
witnessed a month ago (February 2010).

She said it was approximately 2100 hours and they were returning home when they noticed an small aqua blue ball of light about five or six feet (5-6) off of the ground hovering in a tree in her front yard. She said after a couple seconds it just disappeared "*in the blink of an eye.*" The light was described as dim and did not light up the tree.
1843(a)(2) said the light was clearly not a reflection and she asked 1843(a)(2) what it was.
1843(a)(2) stated he did not know.

1843(a)(2) Additionally, mentioned her brother, 1843(a)(2) as someone we should talk to because he claims to have witnessed several strange things in the area. would 1843(a)(2)
1843(a)(2) not elaborate on what she had heard from and said investigators would have to call and speak to him directly. Contact information for the new witnesses has been obtained, however we have currently been unable to contact to arrange an 1843(a)(2)
interview.

1843(a)(2)

On April 20, 2010, a re-interview with 1843(a)(2) was conducted to obtain additional detailed descriptions of the dog-like creatures she encountered twice in September 2009. Details of the encounters can be found in the September investigative reports.

1843(a)(2) summarized her first sighting which occurred on September 11, 2009 at their residence. On this evening, she had just arrived home from shopping and observed a shadow "*lurking*" in her backyard. She originally thought the shadow was the family 1843(a)(2) horse. After using the restroom, went to the backyard to tend to the horses with her daughter. She noticed the horse's water was completely empty, which rarely 1843(a)(2) occurs. At this point, glanced over her shoulder and witnessed a creature crouched down on top of the shed. She was able to view the creature for a few seconds before it leapt out of sight.

1843(a)(2) was unable to give a detailed description of the creature since she witnessed it from behind for only a few seconds. The details was able to provide confirmed 1843(a)(2) the information she provided to investigators in the September and October 2009 interviews. She stated the creature was around eight feet tall, completely hairless with dark brown/grayish skin. The creature was definitely not human and was muscular.

Details are included in the attached Dog-like creature spreadsheet. A new detail emerged in that at the time of the encounter, 1843(a)(2) four-year-old daughter was also outside. When the creature had leapt away, the four year old said the creature looked like a kangaroo.

1843(a)(2) second encounter happened the next night on September 12, 2009. She was also unable to give a detailed description of this creature since this was a brief incident which happened at night. Please see the September investigative report as well as the attached Dog-like creature spreadsheet for complete details.

Two weeks before the creature sightings, 1843(a)(2) Daughter saw a shadow through 1843(a)(2) the window. She came running to and said there was something or someone 1843(a)(2) outside. When looked outside to investigate, nothing was there. Later the same day, they noticed the chain which is used to lock the gate where the horses reside was open.

1843(a)(2) Recently, in March 2010, has been experiencing recurring dreams of a black wolf. The wolf in her dreams seems somewhat familiar. In the dreams, the wolf stands in one place and stares at her. These dreams do not give her good feelings. Coincidentally, soon after the dreams began, 1843(a)(2) saw a black dog by her fence which reminded her of the wolf from her dreams. The dog was standing on four legs during the day time staring at her. The dark eyed dog was normal sized, but had a wolf head and face and long black fur. She was unable to provide much more detail.

1843(a)(2) described how sometimes she hears a mysterious sound of kids playing. The sound seems to be emanating from the ceiling, and happens when her children are either not home or asleep. She guesses the sound may be spirits. 1843(a)(2) stated 1843(a)(2) 1843(a)(2) her husband, has also heard this. When asked to describe what she meant by "*kids playing*" she replied the kids seem to be having fun and giggling.

1843(a)(2) recalls an incident when 1843(a)(2) brother, 1843(a)(2) stayed in her home when her and the family were gone. She remembers when they returned, he said he would never stay in the house again by himself. He was a little disturbed by what had taken place during the night. She said he heard someone walking across the floor to the kitchen, open the refrigerator door and take something out, closed the door and walked back across the floor. She said he got up with his gun to check and see who was there, but he saw no one and no signs of anyone having been there. It should be noted, 1843(a)(2) 1843(a)(2) has since relocated to Texas and no longer lives with 1843(a)(2) and 1843(a)(2)

1843(a)(2)

In the meeting with 1843(a)(2) on April 21, 2010, a main objective was to obtain more detailed information about the creatures he has witnessed throughout his life. Please see the attached Dog-like Creature spreadsheet for supplemental information. Upon asking 1843(a)(2) for detailed information concerning the creatures, he asked for a pen and piece of paper and drew the pictures below to accompany his verbal descriptions.

1843(a)(2) referred to the first creature as being a "*shape shifter*" (depicted in his drawing below). 1843 (a)(2) began to relate the incident involving him and his grandson 1843(a)(2) from a few years ago. 1843(a)(2) had been outside and called for 1843(a)(2) to come outside to 1843(a)(2) see the Creature. 1843(a)(2) described the creature as pale and furless with a hunched back. He noted the creature's legs were not human. During the encounter, the creature jumped over the fence and ran using its hands in a chimpanzee-like manner.

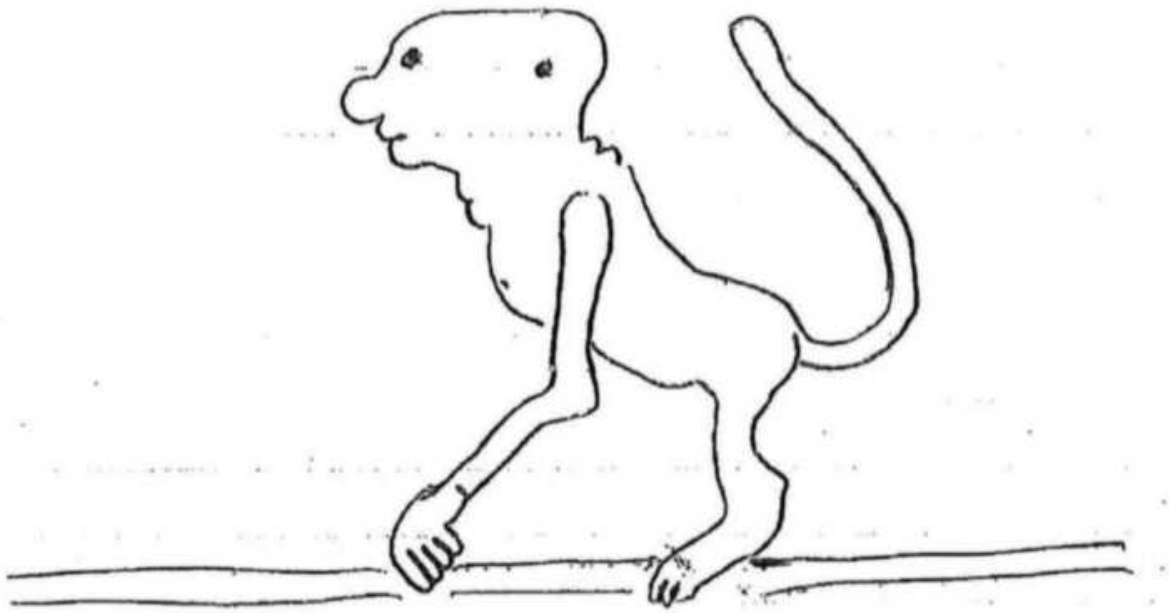

Figure 7 - Creature witnessed by 1843(a)(2) with his grandson 1843(a)(2). Illustration by 1843(a)(2) on April 21, 2010.

The second creature 1843(a)(2) drew is more dog-like in form. The black furred creature had a pig-like snout. The snout was covered in fur. When he came upon the creature, it was sitting and staring at him. The creature, which was the size of a "*big man*", appeared to be hostile. This frightened 1843(a)(2) and he fled the area.

Figure 8 - Dog-like creature witnessed by 1843(a)(2) Illustration by 1843(a)(2) on April 21, 2010.

Additionally, there have been other times during his youth when 1843(a)(2) witnessed similar creatures to the one depicted above. He described a time when him and a group of kids came upon one of these creatures. The creature was frightening to them so they began to throw stones. He also made the general statement when these creatures are present, all dogs get quiet. He described one time in late summer when all of the horses were running erratically in the field. His guess is one of these creatures was scaring them. When he looked for the source of the commotion, he did not see anything as his assumption, by his own admission, is clearly speculation.

1843(a)(2) provided the BAASS team with two different recordings of a howling sound which he says is the same howling sound he had heard growing up in the Fort Duchesne area. One recording originated from the Fort Washakie Reservation in Wyoming and the other is from the Winnebago Indian Reservation in Oklahoma. 1843(a)(2) Numerous times stated these "*sounds*" are identical to those sounds made by "*Skinwalkers*" and "*Shape shifters*".

Current plant experiments

Biosensor Plants

On April 6, 2010 biosensor plants were transported to the [redacted] Ranch, six Spiderwort plants and six Tobacco Plants. These plants will serve as biosensors for the presence of various types of radiation and/or chemicals/materials which can damage DNA. Three of each plant was placed in two different locations (living room and Bedroom) under grow lights which were set to cycle through sixteen hours of light and eight hours of dark daily. Biologist [redacted] utilized the April trip to check on the health of the plants. At the time of the April deployment, the plants had only been at [redacted] Ranch for two weeks, no observations or analysis can be drawn concerning mutation levels in either tobacco or spiderwort.

- **Tobacco heterozygous for the sulfur mutation (Su/+):** This assay is based on a naturally occurring mutation at the Sulfur (Su) gene. Plants heterozygous for the gene, Su/+ are pale green. Mutations that inactivate only the Su allele are visualized as dark green spots while mutations of the wild type allele result in an albino spot (yellow/white). Below is an example of the type of result that would be expected upon exposure to a mutagenic agent.

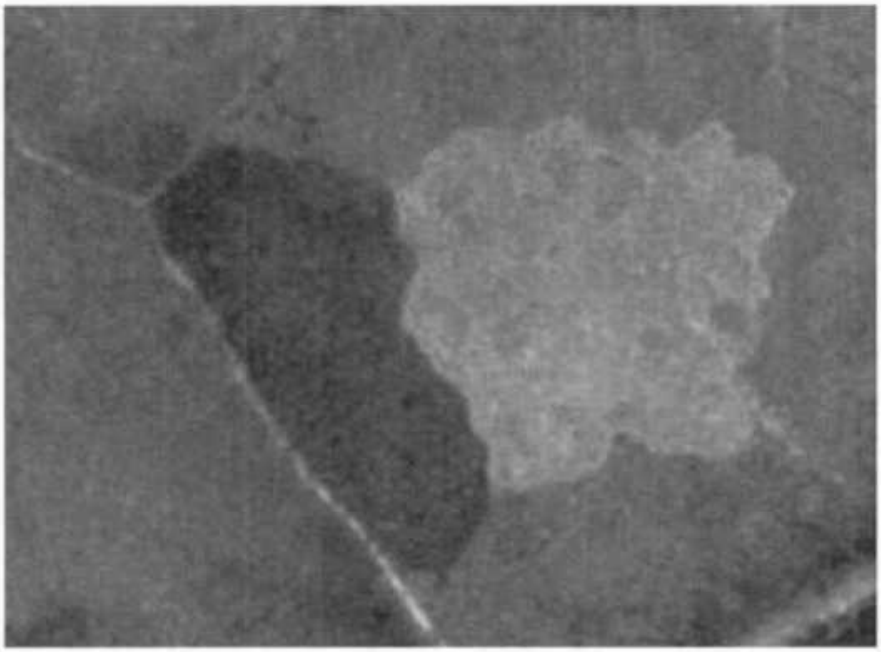

Figure 9 - Su/+ tobacco plants exhibiting mutations in both alleles

Heterozygous plants are required for the bioassay. Initially the plants will be grown inside the trailer and assayed for color spot changes. Once weather conditions at the

ranch allow, plants can be moved to outside locations, either in pots or perhaps planted directly in the ground. AAP Person 29 inspected all Tobacco leaves for the presence of dark green spots; none are present at this time.

- **Spiderwort:** This assay consists of microscopic observation of stamen hairs for alterations in hair cell coloration from blue to pink. This indicates a mutation inactivating the dominant blue color allele allowing expression of the recessive pink color allele. Additionally, pink spots can also be assayed in the flower petals. This assay requires microscopic observation, and will be done on future scientific deployments. A close up of a spiderwort flower is included below showing the appearance of the stamen hairs, which will need to be examined under a microscope.

Figure 10 - Close up picture of spiderwort stamens and stamen hairs

The plants require sixteen hours of light per day to promote flower development. Since the assay involves microscopic examination of the flower, the examination of stamen hairs and petals will be done by the scientific staff during future routine deployments. During the April deployment, Biologist AAP Person 29 assessed the health of the plants and insured the light cycles are running on sixteen hours of light per day. The April deployment was too soon to perform microscopic analysis.

Seed Experiment

A seed germination and growth experiment was set up at both BAASS and AAP Person 4 Ranch on April 22, 2010. AAP Person 18 set up the BAASS control experiment while Biologist AAP Person 29 set up the experiment at [redacted] Ranch Trailer in two AAP Person 4 different locations. One location is the trailer living room while the second is the trailer bedroom. Plants will be grown to determine if differences exist in germination rate and/or growth rate between the three locations. Two types of seeds will be grown in each location; Stokes Sugar Snap Peas and Stokes Green Beans. Both seed types are treated with fungicide to control contamination by fungus. The following steps were taken when planning and setting up the seed experiments to ensure consistent environmental factors are accounted for:

- All locations will be watered with distilled water.
- Specialized containers known as "cone-tainers" are being utilized. Cone-tainers are elongated pots are arranged in a rack for optimal use of space which can be reused many times. This approach will allow the plants to grow for longer periods of time in order to assess plant growth. Two seed types were planted on each tray allowing for forty-nine of each seed type to be grown.

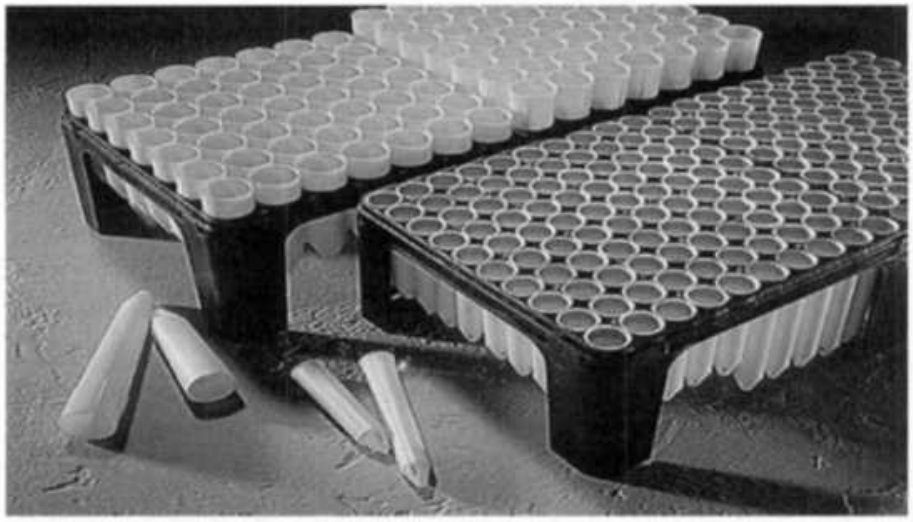

Figure 11 - Example of Cone-tainers and associated racks

- The cone-tainers were placed under Jump Start T5 Grow light systems. This was to control the light cycles at each location. Timers were set on the light systems to provide sixteen hours of light and eight hours of dark.

- To control for extraneous light, large enclosures were placed over the grow light systems. The amount of light will therefore be consistent.

Pictures will be taken and germination charts will be filled out twice daily for all locations. Once germination data collection has been completed, germination charts will be produced. When the experiment has been completed, plants from AAP Person 4 Ranch will be brought back to BAASS for analysis. All plants will be measured and weighed.

RECEIVED
MAY 0 3 2010
BY:

April 27, 2010

AAP Person 7

Items Received
On April 2, 2010, the 1843(a)(2) received four hair samples submitted by you for the purpose of mitochondrial sequencing. The samples were assigned the following laboratory case numbers:
1843(a)(3)

Tests Conducted
DNA was extracted according to standard operating procedures. The extracts were amplified for a region of the mitochondrial *tRNA* and *Cytochrome b* genes and for the canine hypervariable I (HVI) region. Samples yielding canine product were sequenced for HVI; samples without canine product were sequenced for *Cytochrome b* and resulting sequences were compared with known sequences deposited in GenBank.

Results and Conclusions
Sample SU-01 tested as FCU188-1 matched reference *Procyon lotor* (raccoon) samples in GenBank. Sample SU-02, SU-03, and SU-04 tested as 1843(a)(3) all exhibited the same canine HVI sequence. This sequence is frequently found in domestic dogs and would be expected to occur in 9.8% to 13.8% of random dogs at the 95% confidence interval.

Disposition
As per the submission form, any samples will be returned to you within 30 days of this report. All DNA results will remain on permanent record at the 1843(a)(2)

I was assisted by the 1843(a)(2) in completing this case, and I have taken their contributions into account in preparing this report. A full record of the work is available at the 1843(a)(2)
Please contact me if I can be of further assistance on this matter.

1843(a)(2)

This report may not be reproduced, except in full, without written permission of the laboratory.

Figure 14. 1843(a)(2) **analysis**

BAASS

Subject hair analysis
Sender AAP Person 18
Recipient AAP Person 7
Date 03.05.2010 15:37

AAP Person 7 the codes on the report from 1843(a)(regarding the hair analysis are as follows:

1843(a)(3) 1 = Hair from the red stained rock found on the ranch
2 = Control hairs from one of the dogs on 1843(a)(2) property
1843(a)(3) 3. = Short white hairs found on the fence on 1843(a)(2) property near where the "creature" was spotted.
1843(a)(2) 4. = Long black hairs found on the fence on 1843(a)(2) property near where the "creature" was spotted.

AAP Person 41 The control dog hairs were collected by during the trip previous to the most recent one. This dog had a coat with hairs that were similar in appearance to the ones found on the fence (i.e. black and white).

The other two unknown hairs 1843(a)(3) were found by the BAASS investigators on the fence at 1843(a)(2) property in a clump which were later separated by AAP Person 29 and only those with an apparent hair follicle were sent off for DNA sequence analysis.

1843(a)(3) Sample corresponded to the hair embedded in the red stained rock found on the mesa during the January deployment.

The results for the samples were fairly straightforward.

All four samples had the tRNA and cytochome b mitochondrial genes amplified and sequenced. And those that came back identified as canine were amplified for the canine HVI region and sequenced.

The Hypervariable 1 (HVI) DNA sequence for the last three samples were identical suggesting (but not 100% definitive) the same canine individual. However, given the strong physical similarity of the control hairs to the unknown hairs and that the dogs on 1843(a)(2) property run at will on the property strongly argue that the hairs are from the same individual.

The analysis of the DNA sequence of the hair embedded in the red stain identified the hair as originating from a raccoon. Several individuals at the ranch have reported the presence of raccoons in the vicinity of the homesteads, so this finding would not be out of the ordinary.

These results were delivered to Park House last Friday, but as we were out of town last week, the results were not delivered to BAASS until today. We have sent the director of the 1843(a)(3) an email requesting a copy of the raw sequence data for these samples.

1843(a)(2) Blue Orb	yes- shot in arc-like path to Skinwalker Ridge	unknown	unknown	no	n/a	5am dawn		last year
1843(a)(2) Several Lights Coming up from the Gravel Pit	no	n/a	200-300 ft	confused	n/a	Night	15 minutes	Mid-October 2009
1843(a)(2) 1843(a)(2 Golden Orb	yes- shot straight up	90°		Peaceful Feeling		morning		1966
1843(a)(2) Light over Ridge by Home						Stormy Night	45-60 Seconds	1974
1843(a)(2) Unusual lights in the rainy season	unknown	unknown	1/2 mile	fear	n/a	night	2 min	regularly

Witness	Regular Occurrence or One Time
1843(a)(2) Star-like light	once
1843(a)(2) Blue Orb	once
1843(a)(2) Glowing Balls of White Light	regular occurrence
1843(a)(2) Blue Orb	once
1843(a)(2) Several Lights Coming up from the Gravel Pit	one time
1843(a)(2) 1843(a)(2) Golden Orb	one time
1843(a)(2) Light over Ridge by Home	one time
1843 (a)(2) Unusual lights in the rainy season	regular occurrence

1843(a)(2)

Witness	Single or Multiple Lights	Size	Shape	Transparent or Translucent or Opaque	Self Illuminating	Illuminating to Surrounding Objects	Color Description	Changing Colors
Unusual lights in the rainy season	single and multiple	size of headlights	round	translucent	yes	yes	white	no
1843(a)(2) white orb with red circling light	one larger white and one smaller red	grapefruit held at arms length	spherical		yes	no	white with smaller red light	no
1843(a)(2) white orb with red circling light	one larger white and one smaller red	grapefruit held at arms length	spherical		yes	no	white with smaller red light	no
1843(a)(2) light flying over neighbors house	single	volkswagen bug	spherical	opaque	yes	no	red,yellow, green, white	yes- but one color at a time: red, yellow, green, then pure white light
1843(a)(2) floating lights at night							Different Colors	
1843(a)(2) star-size lights in the sky		size of star or bigger						change colors when moving
1843(a)(2) cobalt blue light	single				yes	yes	cobalt blue	
1843(a)(2) Red Ball of Light	single	tennis ball	round with small flat base	unknown	yes	unknown	red with a black ring on the bottom	no
1843(a)(2) Red Ball of Light	single	smaller than a tennis ball	round like a ball	opaque	yes	no	fire engine red	outside of ball was yellow/orange

1843(a)(2)

Witness	Pulsating or Constant light	Light Intensity	Any rings around the light	Gas or Solid Object	Material	Smell	Sound	Tail	Smoke	Radiation of heat
[redacted] Unusual lights in the rainy season	constant	bright	no	unknown	unknown	no	no	no	no	no
1843(a)(2) white orb with red circling light		bright	no	unknown	unknown	no	no		no	no
1843(a)(2) white orb with red circling light		bright	no	unknown	unknown	no	no		no	no
1843(a)(2) light flying over neighbors house	constant	bright	no	unknown	unknown	no	no	left a light trail behind	no	no
1843(a)(2) floating lights at night										
1843(a)(2) star-size lights in the sky										
1843(a)(2) cobalt blue light		lit up sky like the sun								
1843(a)(2) Red Ball of Light	constant tail pulsed when leaving	bright	black ring on the bottom	solid	unknown	swampy-rotten mud smell	no-caused a ringing in ear	yes- a couple of feet long	no	yes- felt warmth on his face
1843(a)(2) Red Ball of Light	yel./orange on ball flickered when moving	like a flashlight	no	solid	looked like glass	no	no	flame-like 1/2-1"	no	warm breeze

1843(a)(2)

Witness	Travel Behavior	Reaction to Stimuli	Speed	Spinning	Highest Altitude	Exhibit Magnetic Properties	Movement of Object Causes Air Disturbance	Cause Atmospheric Effects	Did the light go out?
[redacted] Unusual lights in the rainy season	slowly moved toward him	unknown	less than 15mph	no	30 ft	no	no	no	unknown
1843(a)(2) white orb with red circling light			rapid		Less than airliner height	no	no	no	
1843(a)(2) white orb with red circling light			rapid		Less than airliner height	no	no	no	
1843(a)(2) light flying over neighbors house	smooth, steady, graceful motion	n/a	not very fast	no	10-15 ft	no	yes, moved the tree branches		yes
1843(a)(2) floating lights at night									
1843(a)(2) star-size lights in the sky	random								yes
1843(a)(2) cobalt blue light	ascended straight up								
1843(a)(2) Red Ball of Light	zoomed	flashlight caused orb to come straight at his face	high rate of speed at times	no	8-10 ft	yes- numbed his face a little	yes	no	no
1843(a)(2) Red Ball of Light	wandering smooth motion	seemed to react to voice- began to come her way	fast pitch softball	no	10 ft	no	yes	caused wind to blow	left before she saw it leave

1843(a)(2)

Witness	Did the light/orb take off quickly?	Angle of Take-off	Distance from Viewer	Cause Fear or Other Emotion?	Pet Reaction to Anomaly	Daytime or Nighttime	Duration of Event (minutes)	How Long Ago Was the Sighting?
Unusual lights in the rainy season	unknown	unknown	1/2 mile	fear	n/a	night	2 min	regularly
1843(a)(2) white orb with red circling light			height of airliner	confusion	no	night 2300hrs	20-30 minutes	Jul-09
1843(a)(2) white orb with red circling light			height of airliner	confusion	no	night 2300hrs	20-30 minutes	Jul-09
1843(a)(2) light flying over neighbors house	shot off into the sky			freaked out but not scared		night 2300hrs		Nov-09
1843(a)(2) floating lights at night						night		
1843(a)(2) star-size lights in the sky								Feb-09
1843(a)(2) cobalt blue light								
1843(a)(2) Red Ball of Light	shot off straight up in the air	90 degrees	very close to his face - approx. 8 inches	tense, fear, and curious	n/a	night	5 minutes	Summer 2009
1843(a)(2) Red Ball of Light	did not see it leave	n/a	100 feet	curious	no	9pm	25 minutes	Summer 2009

1843(a)(2)

Witness	Regular Occurrence or One Time
[redacted] Unusual lights in the rainy season	regular occurrence
1843(a)(2) white orb with red circling light	once
1843(a)(2) white orb with red circling light	once
1843(a)(2) light flying over neighbors house	has seen them before
1843(a)(2) floating lights at night	
1843(a)(2) star-size lights in the sky	
1843(a)(2) cobalt blue light	
1843(a)(2) Red Ball of Light	once
1843(a)(2) Red Ball of Light	once

Witness	Single or Multiple Lights	Size	Shape	Transparent or Translucent or Opaque	Self Illuminating	Illuminating to Surrounding Objects	Color Description	Changing Colors
1843(a)(2) Portal	Single	unsure	unsure	Transparent	no	no	clear	no

Witness	Pulsating or Constant light	Light Intensity	Any rings around the light	Gas or Solid Object	Material	Smell	Sound	Tail	Smoke	Radiation of heat
1843(a)(2) Portal	pulsed or rippled like water	n/a	no	unsure- not solid	unsure	none	none	no	no	none

Witness	Travel Behavior	Reaction to Stimuli	Speed	Spinning	Highest Altitude	Exhibit Magnetic Properties	Movement of Object Causes Air Disturbance	Cause Atmospheric Effects	Did the light go out?
1843(a)(2) Portal	stationary	no	none	no	extended up toward the sky about 30-40 feet	no	no	no	Still visible when they left
