MEMORANDUM FOR: DIRECTOR OF INTELLIGENCE, DCS/O

SUBJECT: Declassifying Photographs of Unidentified Flying Objects

1. This office understands that two photographs of unidentified flying objects were taken by a Mr. [redacted] of Phoenix, Arizona, and that these photographs were turned over to Fourth Air Force Intelligence in July of 1947.

This office has been contacted by Mr. [redacted] who is requesting return of his original negatives.

3. The two photographs were copied by the Photographic Records and Services Division of the Air Adjutant General's Office at this headquarters and are in a confidential file of Unidentified Missiles as A-34921AC and 34921AC.

4. This office requests that consideration be given to declassifying these two photographs and that the original negatives be sent to this office for return to Mr. [redacted]

1. In compliance with letter, Office of Public Information, Department of Defense, dated 1 August 1952, the Historical Officer, this headquarters, forwarded negatives of "Flying Saucers" to the above office on 14 August 1952.

2. Forwarded herewith for information are copies of prints made from negatives sent to the Office of Public Information, Department of Defense.

3. Photographs of the "Flying Saucers" were taken by [redacted] on 7 July 1947 at Phoenix, Arizona. The first photograph, Incl No. 1, was reported taken when object was at its lowest point, approximately 2000 ft above the terrain. The second photograph, Incl No. 2, was reported taken when object started its climb upward.

4. Complete information relative to subject photographs may be obtained from the Director of Intelligence, Headquarters Fourth Air Force, this Base.

SYNOPSIS

Better Business Bureau, Chamber of Commerce and Arizona Corporation Commission checked with negative results. Credit Bureau record attached as Exhibit A. City directories and telephone directory checked. Mr and Mrs. [redacted] neighbors, stated SUBJECT is excellent neighbor, caused no trouble, is emotionally high strung, egotistical and a genius in fundamentals of radio and electronics. SUBJECT is musician by trade, has no steady job and devotes all of his time to research. SUBJECT wrote scientific article for nationally known magazine and received honorary Doctor of Science degree from [redacted] University for this article. [redacted] was name devised by SUBJECT to impress people with his importance. SUBJECT conducts no business under this name; enjoys a good reputation in community and is a loyal American. Mrs [redacted] another neighbor, disclosed SUBJECT is a good neighbor and has caused no trouble in community. SUBJECT is musician by trade, but devotes his time to research in electronics, astronomy, radio and photography. SUBJECT wrote thesis on astronomy and was offered an honorary scholarship by big University in east (name unknown). SUBJECT has no close friends or associates, and informant knew no information concerning the origin of [redacted] Files of T-1 reflected the report of interview and observations of Agent. Local agencies checked with negative results.

Investigation of "Flying Discs"
2 September 1947

UNCLASSIFIED

MEMORANDUM FOR THE OFFICER IN CHARGE

On 29 August 1947 in the presence of S/A Brower (FBI Office, Phoenix, Arizona) [redacted] was interviewed at his residence at [redacted] Phoenix, Arizona, in connection with investigation of the "Flying Discs". Mr. Rhodes stated that on the afternoon of 7 July 1947 immediately following a local thunderstorm, at about 1500 hrs., he was walking from his home toward his workshop (located approximately 100ft. directly back of the house) when he heard a noise in the east which sounded to him very much like the approach of a jet airplane, possibly a P-80. He stopped and looked to the east but saw nothing for several seconds. A few seconds later, however, an object appeared from the north-east. The object seemed elliptical in shape with a diameter of 20-30ft. At first sight, it appeared to be at about 5000ft., traveling about 400 to 600MPH. Its color was grey, which made it blend into the clouds and difficult to see at a distance. As soon as it appeared in the north-east, the object spiraled downward reaching a level of about 2000ft. at the end of its second spiral, and then started upward into the west at an angle of 45 degrees, disappearing into the cumulus clouds which appeared to be at about 5000ft. at that time. The object was visible from the time of its appearance in the north-east to its disappearance into the west about 60 seconds. In spite of the fact that a noise was heard prior to the appearance of the object, while in view, it produced no audible sound. The tail of the object had two points on the outside area, visible as it made its two left-to-right circles, which had an approximate radius of 1/4 to 1/2 miles. The object had what looked like a cockpit canopy in the center extending toward the back and under the object. The cockpit did not protrude from the surface but was clearly visible with the naked eye. The object was not revolving on its own axis. It had no discernible landing gears nor propellers. It appeared to have an excellent air foil (tapered from wing tip to wing tip). Mr. [redacted] stated that it is possible that he did not hear the object while it was in sight because of the rustling of tree leaves set up by a wind velocity of 10-15MPH. He also stated that the first sight of the object caused him to think it might be the Navy's new Flapjack plane illustrated on the cover of the May 1947 issue of "Mechanix Illustrated". He later altered his opinion because the object appeared to have no landing gears and no propellers, and the Navy ship is illustrated as having both. [redacted] stated that immediately after the object had started into its first spiral he ran to get his camera, which he kept loaded and set at all times for the purpose of taking candid action shots of his family and which he kept right inside the door of the workshop. By the time he returned with it, the object had completed one circle and had started on its second. At the same time he called to his wife who was in the house, but by the time she arrived in the back yard the object had disappeared. [redacted] stated that he managed to take one photograph of the object while it was at its lowest point (about 2000ft.) (Exhibit I) and another just as it turned out of its second spiral and started upward. (Exhibit II). The second

UNIDENTIFIABLE OBJECTS,
WILLIAMS FIELD, CHANDLER,
ARIZONA.

14 July 1947

MEMORANDUM FOR THE OFFICER IN CHARGE:

On 8 July 1947, this Agent obtained pictures of unidentifiable objects, (Exhibits 1 and 2) from the managing editor of the Arizona Republic newspaper. The pictures were taken by Mr. [redacted], Phoenix, Arizona, at sunset, on 7 July 1947. The Subject objects flew at unconceivable speeds, making three circles in the vicinity of Mr. [redacted] home. The pictures were taken with a box camera, size 620. The photograph (Exhibit 1) was taken as the object passed in front of Mr. [redacted] and Exhibit 2 as the object turned towards Mr. [redacted] The height of the object was estimated at 1000 feet.

AGENT'S NOTES: See Exhibits 1 and 2, photographs of unidentifiable objects, enlarged approximately 20 times. No further reports have been received by this office of objects seen by military personnel.

Report of Trip to Holloman Air Force Base, 5 - 6 May 1948

1. The primary purpose of this trip was to interview Dr. [redacted], representing the Watson Laboratories, who was temporarily on loan to Holloman Air Force Base. Upon arrival, it was learned that Dr. [redacted] had returned to the Watson Laboratories at Red Bank, N. J. A teletype sent from Holloman Air Force Base stating that Dr. [redacted] would not be available for interview did not reach Hq, AMC in sufficient time to postpone the visit. However, it was learned that Dr. [redacted] would be at Maxwell Air Force Base, Montgomery, Ala. on or about 11 May 1948 for an indefinite period of time.

2. A civilian, Mr. [redacted] who works in the same laboratory with Dr. [redacted] had also seen the unidentified flying object while in the presence of Dr. [redacted]. Mr. [redacted] was interviewed with the following stated results:

a. The object definitely was not a balloon.

b. The object appeared round and shiny [illegible] and moved at a high rate of speed.

DOWNGRADED AT 3 YEAR INTERVALS:
DECLASSIFIED AFTER 12 YEARS.
DOD DIR 5200.10

3. Mr. [redacted] promised to send in a detailed report through channels, together with the report of another civilian who also witnessed the phenomenon.

4. It was also learned that a Lt Markley who works in the Radar Laboratory at Holloman AF Base has, on several occasions in the past, witnessed on his scope unidentified flying objects at high altitudes, moving at a very high rate of speed. Lt Markley was not available for interview; however, a request for a detailed report of these observations was forwarded to the Commanding Officer, Holloman Air Force Base.

5. Lt Colonel James C. Beam and Mr. Alfred C. Loedding proceeded to Phoenix, Ariz. to interview Mr. [redacted] and follow up on the report and photographs submitted by him some months ago. Although Mr. [redacted] is currently employed as a piano player in a night club, his primary interest is in a small but quite complete laboratory behind his home. According to his business card, this laboratory is called "[redacted]", and [redacted] is referred to as the "[redacted]". Mr. [redacted] appeared to be completely sincere and apparently is quite interested in scientific experiments. Mr. [redacted] stated he was an aircraft recognition instructor during the last war, and that in his opinion, the object sighted definitely was not a wind-blown object. He reiterated that the object was not less than 2000 ft. away and that it was not much more than 2000 ft. away unless he had greatly underestimated its size. Mr. [redacted] pointed out where he had stood when he took the pictures of this flying object and indicated the exact paths of approach and departure of the object. He added that when the object turned directly away from him, he observed what appeared to be one large opening or vent across the entire trailing edge. Mr. [redacted] promised to send in another more detailed report, incorporating this observation.

DOWNGRADED AT 3 YEAR INTERVALS
DECLASSIFIED AFTER 12 YEARS
DOD DIR 5200.10

UNCLASSIFIED

6. Mr. [redacted] also mentioned having seen a series of photographs taken by another civilian in Phoenix, Ariz. on approximately the same day. He promised to investigate this phase and to forward a set of these photographs to this headquarters if they are available. Mr. [redacted] permitted the ordinary box type camera with which he took his pictures to be brought to Wright-Patterson Air Force Base for examination.

JUN 18 1952

MEMORANDUM FOR: DEPUTY DIRECTOR OF PUBLIC INFORMATION

SUBJECT: (Unclassified) Declassification of Unidentified Flying Object Photographs

1. In accordance with request contained in your memorandum of 5 June 1952, photographs 34921 A. C. and A-34921 A. C. taken by Mr. [redacted] of Phoenix, Arizona in July 1947 have been reviewed by this office and an attempt has been made to locate the original negatives.

2. The original negatives are not on file in this Directorate nor at the Air Technical Intelligence Center, Wright-Patterson AFB. If it is determined that the Photographic Records and Services Division here does not have them, it is suggested that Mr. [redacted] be asked to furnish sufficient data to facilitate tracer action. Such information should include the name and rank of the officer to whom the negatives were submitted as well as the organization, location and date. All of this data should appear on the receipt obtained by Mr. [redacted]

3. If, upon completion of the action suggested above, it is established that the original negatives have never been returned to Mr. [redacted], it is recommended that this be done as soon as they can be located since current policy is to retain personal photographic negatives of unidentified flying objects only as long as is required to analyze and duplicate them for USAF use. Such action would automatically declassify the photographs.

4. It is also recommended that the letter accompanying the original negatives upon their return to Mr. [redacted] include an expression of apology. This should state our regret that, because of an oversight, the negatives were not returned promptly. Such a statement will possibly eliminate any air of secrecy which may have become associated with them as a result of their prolonged retention by the USAF. In this manner, it is hoped that Mr. [redacted] and the press will not accord them any unwarranted attention.

5. Although the photographs would be on file in this Headquarters as unclassified following the action suggested in paragraphs

Comeback Copy to AFOIN-2B3

Incident No. 40 — 7 July 1947, 1600 hours, Phoenix, Airzona.
One observer witnessed an elliptical, flat, gray object, measuring 20-30 ft across, flying 400-600 MPH, spiraling downward to 2000 ft from 5000 ft, then ascending at a 45° angle into an overcast. Observer ran into a garage where he obtained a Kodak Brownie 120 box camera, and snapped two pictures; one negative, and a print of the other, are contained in project files. The negative displays a small apparently flat object rounded on one end, and pointed on the other. The object appears to have a hole in the center. The image is in stark contrast with the background of clouds. From the print, the object appears to be jet black with sharp outlines. Four expert photographers concur in the opinion that the image is of true photographic nature. However, they disagree with each other as to the possibility of filming such an occurrence under the conditions described. Considering the object was grey as described, and at a distance of 2000 feet, it seems unlikely that it would appear pure black on the print. In subsequent correspondence to the reporter of this incident, the observer refers to himself as [redacted] the letterhead of which lists photography among one of its specialities. Yet, the negative was carelessly cut and faultily developed. It is covered with streaks and over a period of six months, has faded very noticeably. An OSI agent discovered that a letter by this observer was published by Amazing Stories magazine early this year. In this letter he stated that he had been interviewed by two Federal agents, had given them pictures of "flying discs" and that the pictures had not been returned. He requested the advice of the magazine as to how to proceed to sue the Government. This individual is aware of the whereabouts of these pictures, but has never requested their return. There are other undesirable aspects to this case. The observer's character and business affiliations are presently under investigation, the results of which are not yet known. Dr. Irving Langmuir studied subject photographs, and after learning of the prior passage of a thunderstorm, discounted the photographed object as being merely paper swept up by the winds.

AIC Opinion: In view of the apparent character of the witness, the conclusion by Dr. Langmuir seems entirely probable.

TO MCIAXS FROM MCIS DATE 21 Mar 49 COMMENT NO. 3. (Con't)

[redacted]

of a soft ball batter in which a shadow of the ball and bat on the ground are seperated by approximately 4 inches and the image of the bat and ball are in contact. In the case of the Rotary type shutter another type of distortion is introduced due to the wiping action of the shutter aperture. This distortion makes it quite probable for the elongration of the tail as shown on one of the exhibits of the attached report. The camera which took this photograph being a box camera had a rotary wiping type shutter.

b. In clarification of comment in sub-paragraph b, paragraph 2, Comment No. 2, the following explanation is given: In the photographic processes it is quite possible to increase the contrast of the finished product over the original visual contrast of the original object by increasing developing time of the negative and printing that negative on a hard or contrasty paper. As stated in the report by Mr. [redacted] the object being grey blended with the grey overcast cloud. It also appears that the underneath side of the aircraft or object in question not being lighted by the sun is, therefore, in shadow and would not reflect as much light to impress it's image on the film as would the clouds which are diffusing the light from the sun. The photographic contrast is obtained through the processing means outlined above.

MCIAXS — MCIS — 21 Mar 49 — 3.

1. In reference to sub-paragraph a of paragraph 2, Comment No. 2, the following explanation is given:

a. There are various types of shutters utilized in cameras. The three (3) present types are the Between the Lens type, Focal Plane type and Rotary type. The distortion produced by these respective shutters are indicative of the type with which the camera is equipped. In the case of the Between the Lens type shutter, which starts opening from the center to the maximum aperture and closes in the reverse manner, the distortion would be only along the axis of travel of the object being photographed. In other words blur resulting from this type of shutter would produce no distortion along the axis normal to the direction of travel of the object. In the case of the Focal Plane shutter, for an object traveling in the same direction as the aperture of the curtain, the distortion can be either that of elongation or for shortening of the image dus to the traveling of the aperture with the direction of the image or against the direction of the travel of the image. For an object traveling at an angle to the direction of travel of curtain aperture, the distortion becomes two-fold along the axis of direction of the object and also an axis normal to the travel of the object. Classic examples of this are the distortion of straight propeller blades when photographed with a focal plane shutter. The blades are apparently bent. Another example is in the case

altitude and azimuth Mr. [redacted] camera was pointed at the time of his two exposures and the approximate time interval between exposures. Physical data like these are absolutely essential if we are to get anywhere in any basic physical explanation of these incidents.

There remains the strong possibility that the entire incident is spurious, and the invention of an excitable mind. This strengthens the need for reinvestigation; if spurious, this fact should be highlighted and even publicized, to quench enthusiasm for the irresponsible reporting of "saucers" and like objects.

Incident #40 — Phoenix, Arizona — 7 July 1947

No astronomical explanation seems possible for the unusual object cited in this incident.

This case is especially important because of the photographic evidence and because of the similarity of these photographs to the drawings by [redacted] (incident #17). The two incidents are separated by slightly more than two weeks, and, of course, they occurred in different localities. It is, however, perhaps more than coincidence that these two best-attested, entirely independent cases should agree so closely concerning the shape of the object and its maneuverability.

The present investigator would like to suggest that this incident, #40, being one of the most crucial in the history of these objects, be reopened for investigation. The actual camera used by Mr. [redacted] should be examined, and the original negatives preserved. Since, from the size of the image on the photograph, we can have an accurate estimate of the angle subtended by the object, this in connection with what appears to be a fairly reliable estimate of the distance, can give us an estimate of the forces and accelerations involved in the trajectory described by Mr. [redacted]. (It is unfortunate that a competent investigator was not dispatched at once to "reenact the crime" with Mr. [redacted] and to obtain sketches of the trajectory, etc., before details faded from his memory.) It would be important to know at what

SUBJECT: Identification of Subject Matter (as per sample)

TO: MCIA FROM: MCIT DATE: 19 Feb 43 COMMENT NO. 1

1. Reference is made to the films taken by Mr. [redacted] (Incident #40) which were forwarded for examination. The following data were derived from a study of the specimen:

a. It is concluded that the image is of true photographic nature, and is not due to imperfections in the emulsion, or lack of development in the section in question. The image exhibits a "tail" indicating the proper type of distortion due to the type of shutter used, the speed of the object and the fixed speed of the shutter. This trailing off conforms to the general information given in the report.

b. The report states the object was seen at approximately 2000 feet at the time of exposure. The observer also reports being able to see clearly a canopy or enclosure. The visual acuity of an average person would allow for this perception, but certainly not much further as the subject had low visual contrast, being gray against a gray sky. If we can establish the distance from camera to subject, we will have quantity #1. The report states that a 620 camera was used, indicating several possibilities, since the 620 is nomenclature for the spooling and width of the film we may have negatives $2\frac{1}{4}$ x $2\frac{1}{4}$", $2\frac{1}{4}$ x $3\frac{1}{4}$" and $2\frac{1}{4}$ x $4\frac{1}{4}$". The sample submitted had been cut and it was not possible to establish the exact frame size. The $2\frac{1}{4}$ x $2\frac{1}{4}$" size was ruled out, leaving $2\frac{1}{4}$ x $3\frac{1}{4}$" and $2\frac{1}{4}$ x $4\frac{1}{4}$". If it were the former, then the focal length of the lens would be 4", and using 2000 feet as the approximate subject distance and the image size at 7/64", we have an approximate size of 44 feet as the diagonal of the object. Now if we choose the latter value of 5" for focal length, we have an approximate value of 55' for the diagonal. Points of measurement are indicated from x to x on Exhibit "A".

c. It should be pointed out, the need for more detail in reports is brought out in this report. A summary would suggest the following points:

(1) Name of camera, type of film used, developer as well as time and temperature, exposure time, focal length of lens and F value used.

(2) If possible, the camera should be aimed to include some ground and horizon as this will help fix the distance from camera to subject by imaging reference points. These reference points can be referred to for evaluation.

Analysis

Preliminary analysis of the negative and prints leads me to doubt the story told by Mr. [redacted]

Judging from the dimensions, the negative was exposed in a simple camera of the box type, which usually has a fixed focus (about 10 feet), fixed shutter speed (about 1/25 of a second) and a simple lens of the Meniscus type. Because of the above mentioned facts, it is unreasonable to assume that sharp outlines such as appears on the negative, could be secured from an object at 2,000 feet, traveling 400 to 600 mph.

Furthermore, according to the story the object (flying craft) was painted gray to blend in with the clouds. But, even if the object would be painted jet black, under the circumstances described, to obtain a contrast such as appears on the negative is also very doubtful.

On all of the prints, excepting the print marked "exhibit A", judging from the outlines, the object has a rotating motion (revolves around its center) instead of a forward motion, contradicting the version stated by Mr. [redacted]

Security Information. Reference TT 143 dated 10 June 52, CSAF Item #4. ATIC has no negatives of the unidentified object that were taken by Mr. [redacted] in July 47. In addition, there is no information available as to whether or not [redacted] ever sent his negatives to the Air Force or whether he just sent prints. We do have some rather poor quality prints of the object. As you know, we have concluded that these photos were probably not authentic. It seems as if Mr. [redacted] attempted to get on the "picture selling band wagon" and if he can prove he sent the negatives to ATIC or to the Air Force and they were never returned, it may lead to a touchy situation. Will you answer Mr. [redacted] or do you request that we answer? Copy negatives of the prints can be made if you so desire, however, the originals are not here.
