On 06-13-76 at approximately 8:00 p.m. Mr. Manuel Gomez, Dulce, N. M. contacted writer by public service stating that he had found a three year old cow at his ranch which appeared to have been mutilated and that he would like for writer to check into it. Writer advised Mr. Gomez that he was on day off and that he would proceed there at 5:00 a.m. on 06-14-76.

Writer contacted Mr. Paul Riley of the New Mexico Cattle Sanitary Board and proceeded to the Gomez Ranch. Upon arrival at the ranch, it was observed that the only vehicle tracks were those of Mr. Gomez's pick up. Since his ranch is locked up and the only entrance is through the gate used by writer. At the scene, writer examined the carcass of a 3 yr. old black White-Faced cow which was lying on it's right side. The left ear, the tongue, the utter, and the rectum had been removed with what appeared to be a sharp precise instrument. No traces of blood were left on the skin of the cow. The hide on the underneath side of the cow was white so that spotting of blood would have been easily detected. Other evidence on the cow was a small puncture on the brisket. No other evidence was available as to cause of death.

Investigation continued around the area and revealed that a suspected aircraft of some type had landed twice, leaving three pod marks positioned in a triangular shape. The diameter of each pod part was 14". The perimeter around the three pods was 16½' (6'X5'3½'). Radiating from the two landings were smaller triangular shaped tripods 25" apart and 4" in diameter. Investigation at the scene showed that these small tripods had followed the cow for approximately 600'. Tracks of the cow showed where she had struggled and fallen. The small triped tracks were all around the cow. Other evidence showed that grass around the tripods, as they followed the cow, had been scorched. Also a yellow oily substance was located in two places under the small tripods. This substance was submitted to the State Police Lab. The Lab was unable to detect the content of the substance.

A sample of the substance was submitted to a private lab and they were unable to analyse the substance due to the fact that it disappeared or disentigrated. Skin samples were analysed by the State Police Lab and the Medical Examiner's office. It was reported that the skin had been cut with a sharp instrument.

On 06-17-76 writer contacted a Mr. Howard Burgess from Albuquerque, N. M. to proceed to the scene and conduct a radiation test. This was 3 days after the incident had occured. His findings were that around the triped marks and in the immediate tracks, the radiation level was twice the normal background reading. Mr. Burgess's qualifications may be checked as he is a retired scientist from Sandia Lab, Albuquerque, N. M. It is the opinion of this writer that radiation findings are deliberately being left at the scene to confuse investigators.

There was also evidence that the tripod marks had returned and removed the left ear. Tripod marks were found over Mr. Gomez's tire tracks of his original visit. The left ear was in tact when Mr. Gomez first found the cow.

The cow had a 3 month old calf which has not been located since the incident This appears strange since a small calf normally stays around the mother cow even though the cow is dead.

Writer has conducted an intensive investigation into approximately 23 cattle mutilations which have been reported in the state of New Mexico within the last 16 months. They all carry the same pattern. Also during this investigation writer has been able to determine that on one of the mutilated cows which occured in New Mexico, a high dosage of Atropine insecticide was analysed in the blood system. This substance is a tranquilizing drug. The Los Alamos Scientific Research Laboratory has conducted a necropsy on several animals including a buffalo, which revealed that the animals had been highly infected with Black Leg.

Investigation has also revealed that on all cattle mutilations which have occured in New Mexico and surrounding states, that the object of the mutilations has been the lymph node system.

This writer has been assisting Sheriff Tex Graves, Logan County , Sterling, Colorado. Samples from Logan County mutilated cows were brought by this writer to be analysed by three private chemists, as it appears that the Government associated laboritories are not reporting complete findings. The substance which was on the cow (mutilated in Logan County) was analysed as containing an ion exchange resin and Vitamin B_{12}. Writer is working with Sheriff Graves due to the fact that Sheriff Graves has been unable to get cooperation from Colorado State University in the analysis of samples. These trips have been made on writer's own time and at his own expense. Writer has contacted several states where these mutilations exist over the 1000 mark.

During this period of investigation several theories have been thoroughly checked out such as a "Satan Worshipers" group and predators. Both have been ruled out due to expertise and preciseness and the cost involved to conduct such a sophisticated and secretive operation. It should also be noted that during the Spring of 1974 when a tremendous amount of cattle were lost due to heavy snowfalls, the carcasses had been eaten by predators. These carcasses did not resemble the carcasses of the mutilated cows.

Investigation has narrowed down to these theories which involve (1) Experimental use of Vitamin B_{12} and (2) The testing of the lymph node system. During this investigation an intensive study has been made of (3) What is involved in germ warfare testing, and the possible correlation of these 3 factors (germ warfare testing, use of Vitamin B_{12}, testing of the lymph Node System).

Investigation is continuing on this case.

Respectfully submitted,

Gabriel L. Valdez

CIR (C)

TO: OO: ALBUQUERQUE

DIRECTOR, FBI (198-1048)

Re Albuquerque letter to the Director, 12/10/79.

Enclosed for the Bureau are five copies of an LHM captioned as above. One copy of this LHM is being designated for KENNETH M. ROMMEL, District Attorney's Office, Espanola, New Mexico. ROMMEL is the Director of a Special Investigative Unit set up under an LEAA grant for the purpose of investigating animal mutilations.

No investigation is currently being conducted by the Albuquerque FBI Office regarding mutilations, and this case is in a closed status. It is again pointed out there have been no reports of mutilations on Indian lands in New Mexico since the Albuquerque Office was instructed to investigate this matter.

MUTILATION OF ANIMALS
ON INDIAN LANDS IN
NEW MEXICO
CRIME ON INDIAN RESERVATION

By communication from FBIHQ dated March 6, 1979, the FBI, Albuquerque Office was instructed to conduct investigation into the mutilations of animals occurring on Indian lands in New Mexico. This instruction was based on a memorandum dated March 2, 1979, from the Department of Justice to FBIHQ, which authorized such investigation.

On April 20, 1979, a conference on livestock mutilations was convened in Albuquerque by Senator HARRISON SCHMITT of New Mexico, and the U. S. Attorney for New Mexico, R. E. THOMPSON. This conference was attended by law enforcement investigators from several states, FBI representatives, other interested parties, and the press. Approximately 180 persons were in attendance. Near the conclusion of the conference, it was reported by the District Attorney in Santa Fe, New Mexico, that a Law Enforcement Assistance Administration (LEAA) grant had been applied for to provide funds for a special investigative unit to investigate cattle mutilations. Subsequently, it was announced that the LEAA grant had been made, and that a special investigative unit for this purpose had been set up under the auspices of the New Mexico State District Attorney in Santa Fe. Former FBI Agent KENNETH M. ROMMEL was appointed to head up that unit.

Investigation by the Albuquerque FBI Office determined that there had been reports of dead animals from both the Santa Clara Reservation and the Jicarilla Apache Reservation in New Mexico. Discussions with GERALD HILL, Bureau of Indian Affairs Criminal Investigator, Pojoaque, New Mexico, regarding the dead cattle which had been reported on the Santa Clara Reservation by members of the Santa Clara Tribe disclosed that these reports were in 1978. There was no evidence to cause it to be determined that the animals had been mutilated, and Investigator HILL did not make a complete investigation of the matter, nor collect any evidence for examination. Subsequent discussions with RALEIGH

198-1045-1

TAFOYA, Chief of Police, Jicarilla Apache Tribe, disclosed similar information, i.e. the reports of unexplained dead animals were in 1978, and although they were surrounded by suspicious circumstances, there was no evidence to positively determine that the animals had been mutilated. In neither case had evidence been preserved for examination, nor were there any complete reports of investigation done regarding the deaths.

The Albuquerque FBI Office has discussed the possibility of animal mutilations with law enforcement officers in New Mexico, including MEL SEDILLO, JR., Investigator, New Mexico Livestock Board, Albuquerque, New Mexico, who has examined numerous animals which had been reported as being mutilated. Investigator SEDILLO said that in each instance his examination showed that the animals had been attacked by predators.

Since the conference of April 20, 1979, the Albuquerque FBI Office has received a voluminous amount of correspondence from interested parties who have expounded their theories regarding this subject. Copies of this information have been furnished to KENNETH M. ROMMEL for his assistance.

On January 15, 1980, KENNETH M. ROMMEL advised his office has pursued numerous investigative leads regarding the possible mutilation of animals in New Mexico. He said that to date, his investigative unit has determined that none of the reported cases has involved what appear to be mutilations by other than common predators. ROMMEL said he has travelled to other states and conferred with investigators in those areas regarding mutilations, and to date has received no information which would justify the belief that any animals have been intentionally mutilated by human beings. ROMMEL added that regarding all the dead animals he has examined, the damage to the carcasses has always been consistent with predator action.

The Albuquerque FBI Office has alerted law enforcement officials who have jurisdiction over Indian lands in New Mexico concerning the March 6, 1979, authorization for the Albuquerque FBI Office to investigate the mutilations of animals on Indian lands in New Mexico. These law enforcement officials have advised that they would immediately notify the Albuquerque FBI Office in the event there are any new occurrences of suspected animal mutilations on Indian lands.

On January 15, 1980, this matter was discussed with Assistant U. S. Attorney RICHARD J. SMITH, U. S. Attorney's Office, Albuquerque. Assistant U. S. Attorney SMITH said that in his opinion there is no Federal interest in continuing an investigation in this matter in the absence of further reports of acts of

MUTILATION OF ANIMALS ON INDIAN LANDS IN NEW MEXICO

suspected mutilation of animals on Indian lands in New Mexico.
